

DS Smith **Box Pallet**

The Box Pallet for Bulk Goods is a corrugated cardboard container, custom-designed for the transport and storage of large volumes of bulk goods.

With a robust and lightweight structure, it offers very high loading and stacking performance, optimising logistics space. Thanks to its customisable design, internal fittings and laminates, it **ensures the protection and preservation of fresh produce** throughout the journey.

Preservation

Box Pallet can incorporate internal fittings such as bags or die-cut inserts, tailored to each product. This ensures a better fit, protection and ventilation, maintaining the quality of fruit and vegetables during transport.

- Customisable interior depending on the product
- Prevents movement and improves preservation

Safety

Thanks to high-strength laminated cardboard (double, triple, quadruple, quintuple or sextuple-layered), Box Pallets can withstand a static stacking capacity of up to 10,000 kg, offering a level of safety that is impossible to achieve with standard cardboard packaging.

- Furthermore, they can be produced in any size and quality, with reinforcements, lids or windows for greater reliability.
- Superior strength compared to conventional packaging
 - Robust design, adaptable to heavy loads

Sustainability

The Box Pallet is made from corrugated cardboard and offers an alternative to wooden or plastic packaging. Its light weight reduces transport costs, saving on logistics expenses and minimising the environmental footprint.

- Easy to recycle after use
- Lighter than wood, with no chemical treatments
- Lower environmental impact throughout the logistics chain
